

Flask – Request Object

The data from a client's web page is sent to the server as a global request object. In order to process the request data, it should be imported from the Flask module.

Important attributes of request object are listed below –

Form – It is a dictionary object containing key and value pairs of form parameters and their values.

args – parsed contents of query string which is part of URL after question mark (?).

Cookies – dictionary object holding Cookie names and values.

files – data pertaining to uploaded file.

method – current request method.
